

Money word problems

Grade 4 Word Problems Worksheet

1. 5 pounds of tomatoes cost \$15.50. How much does one pound of tomatoes cost?

2. A carton of eggs costs \$2.90 and a package of bacon costs \$3.10. How much does it cost to buy 2 cartons of eggs and 1 package of bacon?

3. A bottle of orange juice costs \$3.50 and a bottle of grape juice costs \$5.30. What is the difference in the price between the orange juice and the grape juice?

4. A jar of honey is \$2.40. How much do 4 jars of honey cost?

5. Two boxes of cereal costs \$7.40 and buying one box of cereal only costs \$4. How much do you save by buying two boxes at the same time rather than one at a time?

Answers

- $\$15.50 \div 5 = \3.10
A pound of tomatoes is \$3.10.
- $2 \times \$2.90 = \5.80 for the eggs
 $\$5.80 + \$3.10 = \$8.90$
It would cost a total of \$8.90 for the eggs and bacon.
- $\$5.30 - \$3.50 = \$1.80$
The difference in price is \$1.80.
- $\$2.40 \times 4 = \9.60
4 jars of honey cost \$9.60.
- Buying 2 boxes at once costs \$7.40.
Buying 1 box twice costs $2 \times \$4 = \8 .
 $\$8.00 - \$7.40 = \$0.60$
Buying two boxes at once saves 60 cents.
