## Reflections in the Coordinate Grid

To reflect point P across line $l$, draw a line segment from point P that is perpendicular* to line $l$. Continue the line segment. The reflected point $\mathrm{P}^{\prime}$ is at the same distance from line $l$ as P , just on the other side.

In other words, in a reflection, each point and its image are at an equal distance from the line of reflection, measured along a line that is perpendicular to the line of reflection.
*Two lines or line segments are perpendicular if they meet at a right angle.

1. a. Reflect the points across line $s$.

b. Reflect the figures across line $t$.

2. a. Draw a vertical line that passes through the point $(2,0)$.
b. Draw the points $\mathrm{P}(1,2), \mathrm{R}(3,1)$, and $\mathrm{Q}(5,4)$.
c. Reflect each point across the line. Label the reflected points as $\mathrm{P}^{\prime}, \mathrm{R}^{\prime}$, and $\mathrm{Q}^{\prime}$.
d. Lastly, connect $\mathrm{P}, \mathrm{Q}$, and R to form a triangle, and also $\mathrm{P}^{\prime}, \mathrm{Q}^{\prime}$, and $\mathrm{R}^{\prime}$.

3. James says that figure 2 is congruent to figure 1 because it is a reflection of figure 1 across the horizontal line L .
a. Explain why James's thinking is wrong.
b. How would you fix the situation?
4. Reflect the points listed below in the $x$-axis. Write down the coordinates of the reflected points:
$\mathrm{H}(-2,3) \rightarrow \mathrm{H}^{\prime}($ $\qquad$ , $\qquad$ )
$\mathrm{I}(1,-1) \quad \rightarrow \quad \mathrm{I}^{\prime}($ $\qquad$ , $\qquad$ )
$\mathrm{J}(3,5) \rightarrow \mathrm{J}^{\prime}($ $\qquad$ , $\qquad$ )
$\mathrm{K}(-5,-4) \rightarrow \mathrm{K}^{\prime}($ $\qquad$ , $\qquad$ )

Compare the coordinates of each point and its image. What do you notice?

What do you suppose happens to the coordinates of points that are reflected in the $y$-axis?
5. Pentagon MNOPQ with vertices at $\mathrm{M}(-3,1)$, $\mathrm{N}(-1,4), \mathrm{O}(3,4), \mathrm{P}(5,1)$, and $\mathrm{Q}(0,-1)$ is reflected across the $x$-axis. What are the coordinates of the vertices of the reflected figure?
