## Understanding Fractions

| Fractions are formed when we have a WHOLE that is divided into EQUAL parts. |  |  |  |
| :---: | :---: | :---: | :---: |
| A whole is divided into two equal parts. ONE part is one-half. |  | A whole is divided into six equal parts. <br> ONE part is one-sixth. |  |
| A whole is divided into ten equal parts. <br> ONE part is one-tenth. | $\square$ $\frac{1}{10}$ | Four parts are colored, and the whole has four equal parts. <br> Four-fourths. | $\frac{4}{4}$ |
| Three parts are colored. <br> There are seven equal parts. <br> Three-sevenths. | $\frac{3}{7}$ | Two parts are colored, and the whole has five equal parts. <br> Two-fifths. |  |

| $\frac{3}{8}$ | The number ABOVE the line tells HOW MANY PARTS <br> we have (the colored parts). <br> The number BELOW the line tells how many EQUAL parts <br> the whole is divided into. |
| :--- | :--- |
| "three-eighths" |  |
| After halves, we use ordinal numbers to name the fractional parts <br> (thirds, fourths, fifths, sixths, sevenths, and so on). |  |

1. Color the parts to illustrate the fraction.
a.

$\frac{7}{8}$
b.

c.

d.

f.

$\frac{6}{10}$
$\frac{4}{6}$
$\frac{4}{5}$
$\frac{2}{4}$
$\frac{4}{7}$
g.

$\frac{2}{6}$
h.

$\frac{11}{12}$
i.

$\frac{5}{9}$
j.

$\frac{1}{5}$
k.

2. $\square \square \square \square \square \square$
$\frac{9}{10}$
$\frac{2}{7}$
