

Dividing integers

Grade 5 Integers Worksheet

Rule:

The quotient of two numbers with same signs is a positive number.

The quotient of two numbers with different signs is a negative number.

Find the quotients.

1) $42 \div (-14) =$

11) $-204 \div (-3) =$

2) $152 \div 19 =$

12) $57 \div (-19) =$

3) $-210 \div 10 =$

13) $-76 \div (-19) =$

4) $145 \div 5 =$

14) $-153 \div 3 =$

5) $215 \div 5 =$

15) $-68 \div (-17) =$

6) $209 \div 19 =$

16) $-210 \div (-6) =$

7) $-120 \div 8 =$

17) $230 \div 10 =$

8) $36 \div (-9) =$

18) $117 \div 9 =$

9) $-32 \div (-4) =$

19) $-45 \div (-15) =$

10) $140 \div (-14) =$

20) $45 \div (-15) =$

Dividing integers

Grade 5 Integers Worksheet

Rule:

The quotient of two numbers with same signs is a positive number.

The quotient of two numbers with different signs is a negative number.

Answers:

1) $42 \div (-14) = -3$

11) $-204 \div (-3) = 68$

2) $152 \div 19 = 8$

12) $57 \div (-19) = -3$

3) $-210 \div 10 = -21$

13) $-76 \div (-19) = 4$

4) $145 \div 5 = 29$

14) $-153 \div 3 = -51$

5) $215 \div 5 = 43$

15) $-68 \div (-17) = 4$

6) $209 \div 19 = 11$

16) $-210 \div (-6) = 35$

7) $-120 \div 8 = -15$

17) $230 \div 10 = 23$

8) $36 \div (-9) = -4$

18) $117 \div 9 = 13$

9) $-32 \div (-4) = 8$

19) $-45 \div (-15) = 3$

10) $140 \div (-14) = -10$

20) $45 \div (-15) = -3$
