

Multiplication word problems

Grade 3 Math Word Problems Worksheet

Annie takes trick or treating very seriously. So, she starts planning days before Halloween.

1. First, she wanted to find out the number of houses in her village. If the village has 5 houses per block and has a total of 9 blocks, how many houses are there?

2. She also estimated the number of candies that she will receive from each block. If she will receive around 7 candies from every house, and there are 5 houses in a block, how many candies will she receive from each block?

3. Annie wants to know how many children will go trick or treating in their village which is over 100 years old. If there are 6 children on each of the 9 blocks, how many children will go trick or treating in Annie's village?

Answers

1. $5 \times 9 = 45$
There are 45 houses in her village.
2. $7 \times 5 = 35$
She will receive 35 candies from each block.
3. $6 \times 9 = 54$
There will be 54 children that will go trick or treating in Annie's village.
4. $9 \times 8 = 72$
It would take her 72 minutes to finish trick or treating.
5. $4 \times 2 = 8$
She spent \$8 on all the costumes.
