Humans cannot survive in space. Space ships must protect them and meet their needs.

Match each human need to the way astronauts meet it in space.

- **Air**: Food is kept in sealed containers so it doesn't float away.
- **Water**: Astronauts can wash with waterless soap and shampoo.
- **Food**: Space toilets suck waste away to a tank.
- **Shelter**: Sleeping bags are strapped down so they don't float.
- **Keeping Clean**: Sleeping bags are strapped down so they don't float.
- **Bathroom**: Space ships and space suits must carry air.
- **Exercise**: Astronauts can run on special treadmills.
- **Sleep**: Space ships carry little water. It must be recycled.

Space ships and space suits protect astronauts from extreme heat and cold.
Answers

Match each human need to the way astronauts meet it in space.

- **Air**
  - Food is kept in sealed containers so it doesn't float away.

- **Water**
  - Astronauts can wash with waterless soap and shampoo.

- **Food**
  - Space toilets suck waste away to a tank.

- **Shelter**
  - Sleeping bags are strapped down so they don't float.

- **Keeping clean**
  - Space ships and space suits must carry air.

- **Bathroom**
  - Astronauts can run on special treadmills.

- **Exercise**
  - Space ships carry little water. It must be recycled.

- **Sleep**
  - Space ships and space suits protect astronauts from extreme heat and cold.
