

Biomes

Grade 3 Science Worksheet

A biome is a large area of the Earth where certain plants and animals live. Biomes are determined largely by the area's climate.

Match each biome to its description.

aquatic •

- Very little rain falls, so plants and animals here don't need much water

grassland •

- Biome with the most trees and the largest diversity of species

desert •

- Gets enough rain for grasses to grow, but not enough for a lot of trees

tundra •

- The coldest biome where the land is frozen most of the time

forest •

- Includes both freshwater and saltwater ecosystems

Choose one biome and describe its climate. Draw a picture showing some of the living things in the biome.

Answers

Match each biome to its description.

aquatic

grassland

desert

tundra

forest

Very little rain falls, so plants and animals here don't need much water

Biome with the most trees and the largest diversity of species

Gets enough rain for grasses to grow, but not enough for a lot of trees

The coldest biome where the land is frozen most of the time

Includes both freshwater and saltwater ecosystems
